

DriverLog

Milestone Update

Where the DriverLog build actually stands — the honest version.

INTERNAL / PERSONAL LOG

July 2026 · Author: GRIT

OBJECTIVE

Why this app exists

Help gig drivers (Grab, Lineman, Bolt, Shopee, taxi) answer one question fast: **“is this shift actually worth it?”**

Product bet

- Free forever for individual drivers — trust is the moat
- Offline-first: works with zero signal, syncs later
- Thai + English from day one (local market first)

Tech shape

- Single-file PWA (site/index.html) + IndexedDB store
- PocketBase backend built, kept local-only for now
- Swappable Sync adapter (PB → Firebase later if needed)

COMPLETION

Live in production at v2.6.3 / SW v1.6.0

LIVE

driverlog.link confirmed in sync, no undeployed changes

Consent

GDPR consent banner live (gtag)

MIME fix

Blank-page incident diagnosed + resolved

AdSense

Monetization live on dashboard

Also shipped this cycle

- Multi-vehicle tracking, weekly earnings recap card, first-run onboarding empty-state
- Affiliate placeholder card + FAB desktop-centering fix, both deployed (not just staged)
- site/ refactored into index/login/app.html + app.js; HTML no-cache headers added

KNOWN GAPS

What's still built but not switched on

Dormant, ready to flip

- Cloud sync (PocketBase): code complete, PB_URL empty — blocked on hosting, not on code
- AdSense slot: real ad-unit ID still a placeholder
- Affiliate card: live on dashboard, but still no real partner deal behind it

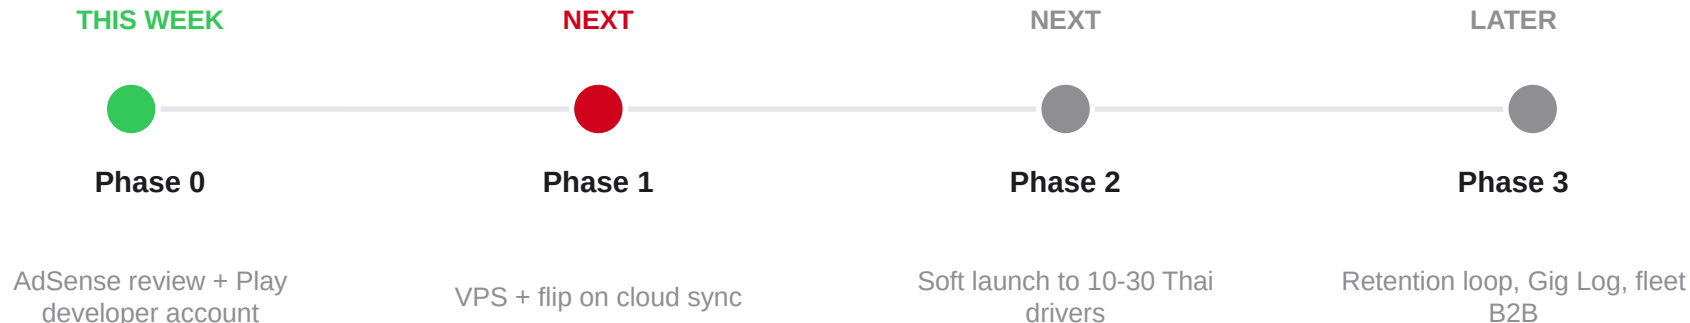

Process notes

- Production is no longer local-only — driverlog.link is live and deploys are now user-coordinated
- MIME/blank-page incident (Jul 5) root-caused to Hostinger Content-Type handling, fixed via .htaccess
- Every change must clear the QA/Testing agent before it's logged done

ROADMAP

Launch & Learn, not more features

The one thing to do next

- Publish the AdSense consent message, submit for review, stand up Play internal testing — cheap, already built, unlocks both revenue and real distribution

DriverLog

Feature-rich, unvalidated.

Next phase is putting it in front of real drivers — not building more.
