

**DriverLog**

# Milestone Update

*The default financial companion for on-demand workers.*

**INVESTOR / PARTNER BRIEF**

July 2026 · Author: GRIT

## OBJECTIVE

# The problem and the bet

Gig drivers earn on thin, volatile margins and have no easy way to know **whether a shift actually pays**. DriverLog turns raw revenue and fuel entries into a clear, per-shift profit verdict — for free.

### North star

- Default income + operations companion for on-demand work
- Starts with drivers, expands to any gig paid by the transaction

### Business model

- Free forever for drivers — trust is the moat, never sell user data
- Monetize around them: ads, affiliate revenue, fleet B2B tier

## TRACTION

# Live product, real usage foundation

**Live**

Cost to drivers, ever

### Revenue engine, already in motion

- Display advertising live on the dashboard, EU-compliant consent flow in place
- Affiliate placement prototype staged (fuel cards, insurance, phone plans)
- Fleet B2B tier planned once the multi-driver sync backend goes live

WHY NOW

# The moat and the market

## Market

- Millions of Grab / Lineman / Bolt / Shopee / taxi drivers across Southeast Asia
- Same log-income → log-cost → verdict loop generalizes to couriers, field service, freelancers

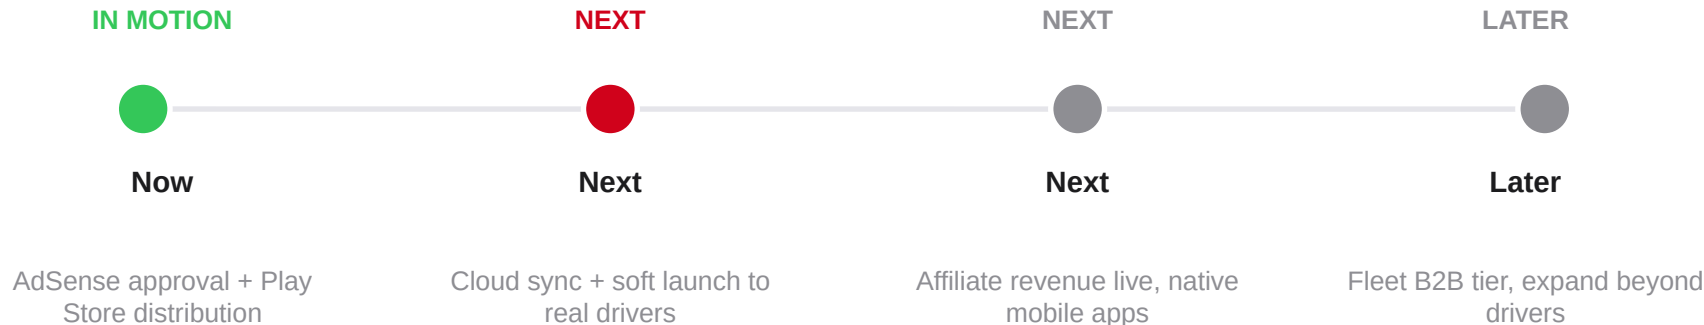

## Moat

- Free-forever core builds trust display-ad competitors can't match
- Offline-first design fits a market with patchy connectivity — harder to copy well

## ROADMAP

# From validated utility to platform

### What this unlocks

- A validated core loop + real distribution channel — the foundation for affiliate revenue and a paid fleet tier

**DriverLog**

# A trusted free product, monetized around the driver.

Next: real usage data from a soft launch, then scale the revenue engine.
